ABSTRACT OF THE DISCLOSURE

In one embodiment, a method includes but is not limited to presenting, via a wireless device, a response aggregation drawn upon a message having at least two desired recipients. In another embodiment, a method includes but is not limited to accepting, via a wireless device, user input requesting response aggregation drawn upon a message having at least two desired recipients. In another embodiment, a method includes but is not limited to presenting at least two message-structure item questions via a wireless device. In another embodiment, a method includes but is not limited to receiving input requesting response aggregation drawn upon a message having at least two desired recipients; and transmitting the message to at least one of the at least two desired recipients, wherein said transmitting is via at least one wireless device. In another embodiment, a method includes but is not limited to transmitting, via a wireless device, a message having at least two desired recipients. In addition to the foregoing, other method embodiments are described in the claims, drawing, and text forming a part of the present application. In one or more various embodiments, related systems include but are not limited to circuitry for effecting the foregoing-described method embodiments; the circuitry can be virtually any combination of hardware, software, and/or firmware configured to effect the foregoing-described method embodiments depending upon the design choices of the system designer.
